Close-cut tolerant

CEZANNE performs very well under close cutting (e.g. golf greens) and performs equally well in cold/temperate regions as it does in hot and dry regions with irrigation.

Proven wide adaption

Good performance continues to be proven in STRI trials where it is top ranking, and from results of official trials in France and Germany. In 2007 CEZANNE also joined the ScanTurf and ScanGreen Danish lists.

Extreme density

The good adaptation to close cutting is partly due to a very high density.
